Freelancer Client Portal

Complete Website Outline & Development Roadmap

1. Website ka main concept

Freelancer Client Portal ek SaaS platform hoga jahan freelancers apne clients, projects, payments, invoices aur files manage kar saken. Har freelancer apna account banayega aur clients ko portal ka secure login de sakega. Client login karke apne project ki progress, files aur invoices dekh sakega.

User roles

• Freelancer: projects create/manage karega, clients invite karega, invoices bhejega aur files share karega.
• Client: apne assigned projects dekhega, progress check karega, files access karega aur messages bhejega.

2. Main website pages

Page	Features
Home	Landing page, product features, pricing aur signup call-to-action
Register	Freelancer account creation
Login	Secure login aur password recovery
Dashboard	Projects, clients, earnings aur pending payments ka overview
Projects	Projects create, edit, assign aur manage karna
Clients	Client details aur project relationships manage karna
Invoices	Invoices create, send, download aur payment status track karna
Messages	Freelancer aur client ke darmiyan communication
Files	Project documents aur deliverables share karna
Settings	Profile, password, notifications aur account settings

3. Freelancer Dashboard

Dashboard par freelancer ko ek nazar mein apne kaam ki current situation samajh aani chahiye:
• Total Projects
• Active Projects
• Completed Projects
• Total Earnings
• Pending Payments
• Recent Activities

4. Project Management System

Project create karte waqt fields:

• Project name
• Client name / assigned client
• Project budget
• Start date
• Deadline

• Project description
• Current progress percentage

Suggested project statuses: Pending, In Progress, Review, Completed.

5. Client Dashboard

Client apne login ke baad sirf apne assigned projects aur un se related information access kare:
• Apne projects dekhna
• Project progress check karna
• Shared files download karna
• Freelancer ko messages bhejna
• Invoices aur payment status dekhna
• Project completion status check karna

6. Earning / Subscription Model

Platform ko subscription-based SaaS banaya ja sakta hai. Neeche starting ke liye example prices hain; ye market-verified rates nahi hain aur real customers se feedback lekar adjust karne chahiye.

Plan	Proposed monthly price	Possible positioning
Free	Rs. 0	Limited active projects aur basic features
Starter	Rs. 999	Solo freelancers ke liye
Pro	Rs. 1,999	Zyada projects, clients aur advanced tools
Business	Rs. 3,999	Small teams aur expanded usage

Revenue example: agar 20 customers Rs. 1,999/month ka plan lein, to gross recurring revenue Rs. 39,980/month hoga. Hosting, payment fees, taxes, support aur customer acquisition costs is mein se minus honge; ye earning ki guarantee nahi hai.

7. Recommended Technology Stack

Technology	Purpose
React / Next.js	Frontend aur web application UI
Node.js	Backend APIs / server-side logic
PostgreSQL	Relational database
Supabase Auth	Authentication aur user sessions
Socket.IO	Real-time chat (optional for MVP)
Cloudinary ya secure object storage	Project files aur images
Payment provider	Subscriptions; Pakistan mein availability, eligibility aur fees pehle verify karein
Vercel / suitable hosting	Deployment and hosting

8. Suggested Database Structure

Initial database tables:

```
users
freelancer_profiles
clients
projects
project_tasks
messages
invoices
payments
project_files
subscriptions
notifications
```

Important data rules: Har project ko uske freelancer aur client se link karein. Client ko sirf apne assigned projects ka access mile. Server-side authorization har API request par enforce karein. Passwords plain text mein store na karein; trusted authentication provider use karein. Files ke liye private storage aur expiring access links consider karein.

9. Development Roadmap

Phase 1 – Authentication
Signup, login, logout, password recovery aur role-based access.

Phase 2 – Freelancer Dashboard
Projects, clients, earnings aur activity overview.

Phase 3 – Project Management
Project creation, editing, status, progress aur deadlines.

Phase 4 – Client Portal
Client invitation, secure login aur assigned project view.

Phase 5 – Invoices & Files
Invoice generation, PDF download aur secure file sharing.

Phase 6 – Real-time Chat
Freelancer-client messaging aur notifications.

Phase 7 – SaaS Subscription
Free/paid plans, usage limits aur subscription management.

10. MVP – Pehla working version

Pehle version mein sirf essential features banayein: authentication, freelancer dashboard, project management, client portal aur basic invoices. Chat, advanced automation aur paid subscriptions baad mein add karein. Is se tum jaldi usable product launch karke real freelancers se feedback le sakte ho.

11. Launch se pehle checklist

- Mobile responsive design
- Role-based permissions test
- Client data isolation test
- Form validation aur error handling
- Database backups
- Secure file access
- Privacy policy aur terms
- Basic analytics / error monitoring
- 5–10 freelancers ke saath usability testing

Note: SaaS se income guaranteed nahi hoti. Pehle potential customers se baat karein, unki actual problems samjhein, MVP launch karein aur payment plans ko demand ke mutabiq test karein.
